

Feature Name	Type	Source Document	Description
monthly_revenue	Numerical	Income Statement	Average monthly revenue
monthly_expenses	Numerical	Income Statement	Total monthly expenses
net_profit_margin	Numerical (derived)	Income Statement	(Revenue - Expenses) / Revenue
cash_on_hand	Numerical	Bank Statement	Current cash available
receivables_total	Numerical	Balance Sheet / Invoices	Total outstanding invoices from customers
payables_total	Numerical	Balance Sheet	Total outstanding bills to vendors
loan_utilization_rate	Numerical	Bank / Credit Data	Used credit / total credit line
days_sales_outstanding	Numerical	Invoices	Avg. days to collect payments from customers
days_payables_outstanding	Numerical	Bills / Invoices	Avg. days to pay vendors
monthly_transaction_volume	Numerical	Bank Statement	Number or value of monthly transactions
avg_invoice_value	Numerical	Invoices	Mean value of issued invoices
business_age_years	Numerical	KYB / Registry	Years since registration
employee_count	Numerical	KYB / Documents	Number of employees
industry_code	Categorical	KYB	Industry type (e.g. NAICS)
revenue_trend_3mo	Numerical (derived)	Accounting / Bank	Slope or trend over 3 months
debt_to_equity_ratio	Numerical (derived)	Balance Sheet	Total liabilities / equity
current_ratio	Numerical (derived)	Balance Sheet	Current assets / current liabilities
quick_ratio	Numerical (derived)	Balance Sheet	(Cash + Receivables) / Current liabilities
interest_coverage_ratio	Numerical (derived)	Income Statement	EBIT / Interest expense
profit_trend_3mo	Numerical (derived)	Income Statement	Trend in net profit over 3 months
cash_burn_rate	Numerical (derived)	Bank / Income Statement	Monthly net cash outflow
avg_balance_last_3mo	Numerical	Bank Statement	Average bank balance in last 3 months
overdraft_count_3mo	Numerical	Bank Statement	Times account went negative last 3 months
high_value_tx_count	Numerical	Bank Statement	Number of transactions >

Feature Name	Type	Source Document	Description
variance_monthly_revenue	Numerical	Income Statement	\$10k (or threshold) Std dev of monthly revenue over 6 months
seasonal_revenue_pattern	Categorical	Accounting / Sim	"None", "Seasonal High", "Seasonal Low"
return_tx_rate	Numerical	Bank Statement	% of returned or failed transactions
expense_to_revenue_ratio	Numerical (derived)	Derived	Monthly expenses / revenue
owner_credit_score	Numerical	KYC / Credit Bureau	Personal credit score of SME owner
owner_age	Numerical	KYB / KYC	Age of the owner
owner_experience_years	Numerical	KYB	Experience of owner in the business domain
founder_has_default_history	Boolean	KYB / Credit	Has the founder defaulted before?
industry_default_rate	Numerical	External DB	Avg. default rate for the industry
local_economic_indicator	Numerical	External Source	Local GDP growth / unemployment rate
market_position_score	Categorical	KYB	Position in market: "Niche", "Mid", "Leader"
regulatory_flags	Boolean	KYB / Sim	Is industry flagged as high-risk?
prev_loans_count	Numerical	Credit Bureau / Bank	Number of past loans taken
on_time_payment_ratio	Numerical	Credit Data	Percent of payments made on time
current_loan_balance	Numerical	Credit Bureau	Current loan balance across products
num_defaults_last_12mo	Numerical	Credit Bureau	Count of defaults in the past year
pandemic_impact_flag	Boolean	Simulation Flag	Was business impacted by synthetic pandemic event
government_subsidy_received	Boolean	Simulation	Did they get public financial aid
fraud_alert_flag	Boolean	Simulation	Synthetic flag for anomaly injection

Feature Name	Type	Source	Description	Purpose in Your Pipeline
archetype	Categorical	Simulation	The "true" persona of the SME	For Evaluating Segmentation Model. Your model will try to find these clusters on its own.
default_in_12_mo	Boolean (0/1)	Simulation	Did the SME default within 12 months?	Target for Credit Score / PD Model. This is the primary outcome you want to predict.
credit_limit	Numerical	Simulation	The total credit line granted to the SME.	A key component for calculating Exposure at Default (EAD) in the ECL model.
collateral_type	Categorical	Simulation	Type of collateral backing the loan.	An input for the LGD model.
collateral_value	Numerical	Simulation	Estimated value of the collateral.	An input for the LGD model.
loss_given_default	Numerical (0-1)	Simulation	The % of exposure lost if a default occurs.	Target for LGD Model. This is a core component of the final ECL calculation.
